From January 1, 1995 to December 31, 1995 the Department of Analytical Chemistry analyzed 405 feed samples from 50 different manufacturers. The products were analyzed to determine that the label guarantees were in compliance with State of Connecticut regulations. Included in the survey are products intended for commercial agricultural operations as well as products intended for household pets. The samples were collected by Alton VanDyke and John Schneider of the Connecticut Department of Agriculture. The analyses were performed by Craig Musante and Mamie Pyles under the supervision of Dr. David Stilwell.

In Table 1 are listed the results of the proximate analysis for each sample as well as the label guarantee for the product. Values are given in percent. A deficiency in the protein or fat value is indicated by a minus (-) sign next to the Found column for the parameter. An excess of fiber is indicated by a plus (+) sign next to the Found fiber column. A product is found to be "unsatisfactory" if the found value of a parameter is outside of the value calculated from the label guarantee using the percent analytical variation guidelines recommended by the Association of the American Feed Control Officials. Of the 405 samples analyzed, 39 were found to be deficient. Specifically, 21 were low in protein, 5 were high in fiber and 10 were unsatisfactory in one or more micronutrients. Results of the analysis for micronutrients are given in Table 2; all values are in percent unless otherwise indicated.

The Connecticut Agricultural Experiment Station is an Equal Opportunity, Affirmative Action Employer. Persons with disabilities who require alternate means of communication of program information should contact the Station Editor at (203) 789-7223 (voice) or 789-7232 (FAX) or [caesadm@caes.state.ct.us](mailto:caesadm@caes.state.ct.us) (e-mail).

## The Connecticut Agricultural Experiment Station,

founded in 1875, is the first experiment station in America. It is chartered by the General Assembly to make scientific inquiries and experiments regarding plants and their pests, insects, soil and water, and to perform analyses for State agencies. The laboratories of the Station are in New Haven and Windsor; its Lockwood Farm is in Hamden. Single copies of bulletins are available free upon request to Publications; Box 1106; New Haven, Connecticut 06504.
